ABSTRACT OF THE INVENTION

A system and method of processing commands receives and stores in a memory a first command line interface. The first command line interface processes commands addressed to boards of a first board type. The system and method receives and stores in memory a second command line interface. The second command line interface processes commands addressed to boards of the first board type. The system and method processes a first command using the first command line interface and a second command using the second command line interface. The first command and the second commands are addressed to boards having the first board type.
